

CULTURE CHANNEL

WHY CHOOSE THIS METHOD ?

This cultivation method provides an interesting answer to the problem of poor soil quality, land availability and control of agroclimatic parameters.

BENEFITS

Objective:

keep the greenhouse clear and dry on the drainage

Optimal circulation

Prevent roots from coming out of bags and coming into contact with drainage water

Reduce the spread of diseases and their spread among plants

Save water, fertilizers and plant protection products at the same time

Increase production and quantity produced

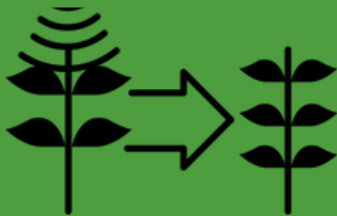

Allow the reuse of water and nutrients discharged

Maximize aeration between substrate bag and drained liquid flow

Water circulation in plants identical for each plant

Manage crop growth more easily

Improve working conditions by adopting an ideal working position

Improved hygiene thanks to easier aisle cleaning
